

# EVAC Sewage Treatment Units

## EVAC Membrane Bioreactor – Sewage Treatment

The EVAC Membrane Bioreactor (MBR) Series Sewage Treatment plant represents EVAC's advancement in the treatment of black and grey water.

The EVAC MBR units are designed as the future alternative for traditional biological sewage treatment. Utilising the latest in membrane technology, they easily fulfil all current and future treatment requirements and in certain cases, the effluent from the unit can be re-cycled for irrigation or re-use in toilet flushing throughout the installation.

Thanks to the advancement in membrane technology and the reduction in power consumption in the EVAC MBR, the quality of the discharged effluent is exceptionally high and said to be better than 80% of the world's drinking water.
